BRINGING NATURE AND TECHNOLOGY TOGETHER

What?

Give animals same level of protection as humans have

How?

Via Electronic Pet Passport containing breeding records, information about animal's relocation and any changes related to its health or achievements.

The Electronic Pet Passport meets three requirements:

- ☑ availability
- 📄 accuracy
- 🔒 data security

For this very reason we have decided to use the **blockchain**

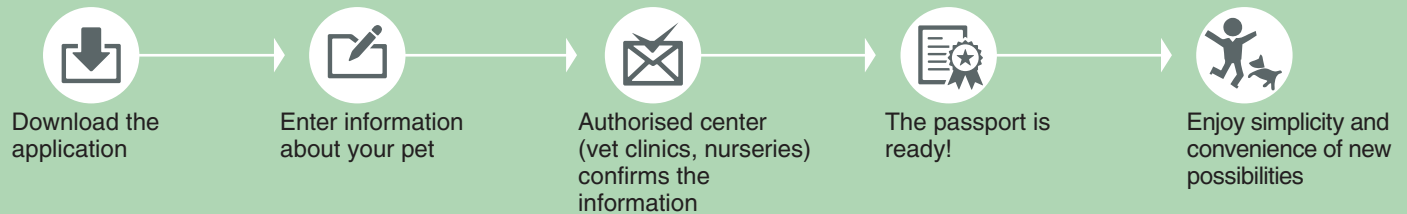

What opportunities does the Electronic Pet Passport offer?

- Single electronic document instead of crowd of piece of paper
- Worldwide veterinary assistance due to free access to information
- Traveling abroad without collecting additional documents
- Authentic breeding records of your four-legged friend
- Simple search of missing and stolen animals
- Global Community of pets and their owners

Who can benefit from it?

In addition to 2 billion pet owners around the world, it would become a convenient tool for animal welfare organisations, ecological communities, veterinary clinics and nurseries, pet shops, border patrol services and everybody who is connected to animals.

HOW DOES IT WORK?

Team
